

# SQL Access to VistA

K.S. Bhaskar

# Overview

- A mature, high performance, hierarchical key-value NoSQL database whose code base scales up to mission-critical applications like large real-time core-banking and electronic health records, and also scales down to run on platforms like the Raspberry Pi Zero, as well as everything in-between.
- *Rock Solid. Lightning Fast. Secure. Pick any three.*

YottaDB is a registered trademark of YottaDB LLC

- Octo is a SQL database engine that whose tables are stored in global variables
- Octo is a YottaDB application, not a GT.M application
  - Requires ydb\* environment variables
  - Runs on SI replication instance from GT.M or YottaDB

Octo is a registered trademark of YottaDB LLC

# Demo Part 1 of 2

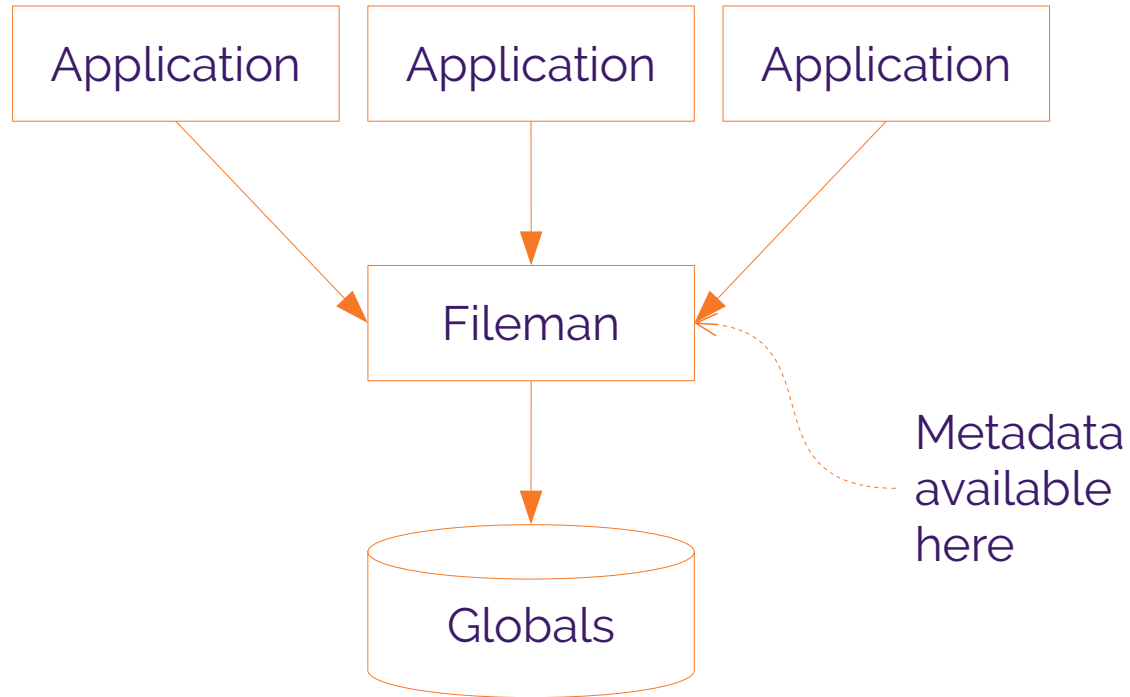

# SQL Access? Why?

- VistA is a great healthcare information system
- Fileman has capable and efficient reporting tools
- But...

# SQL Access? Why?

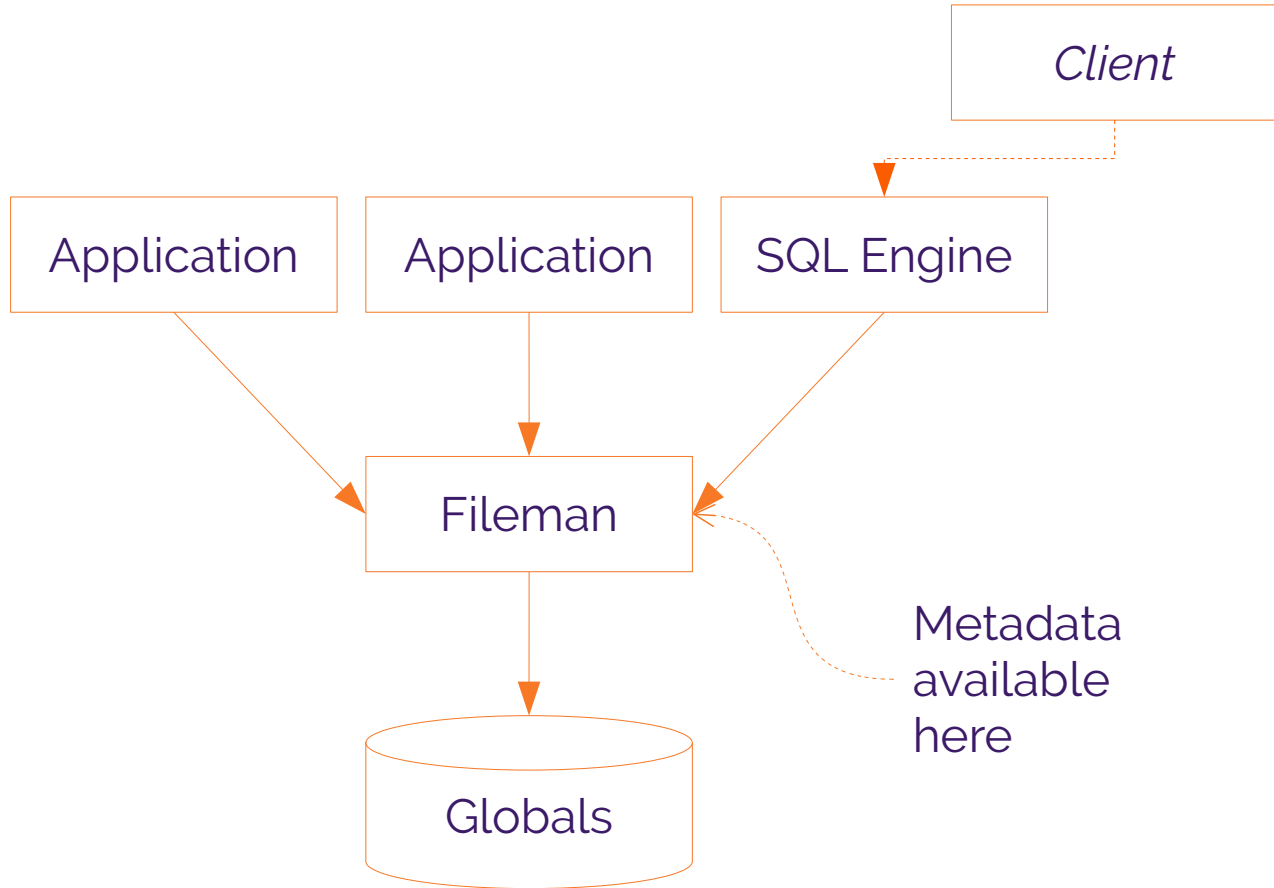

- VistA is a great healthcare information system
- Fileman has capable and efficient reporting tools
- But...
  - Knowledge of Fileman and roll/scroll interface
  - Business analysts know SQL and expect GUIs
  - Wealth of existing tools, many FOSS – e.g., see <https://opensource.com/business/16/6/top-business-intelligence-reporting-tools>

# VistA Layers (Simplified)

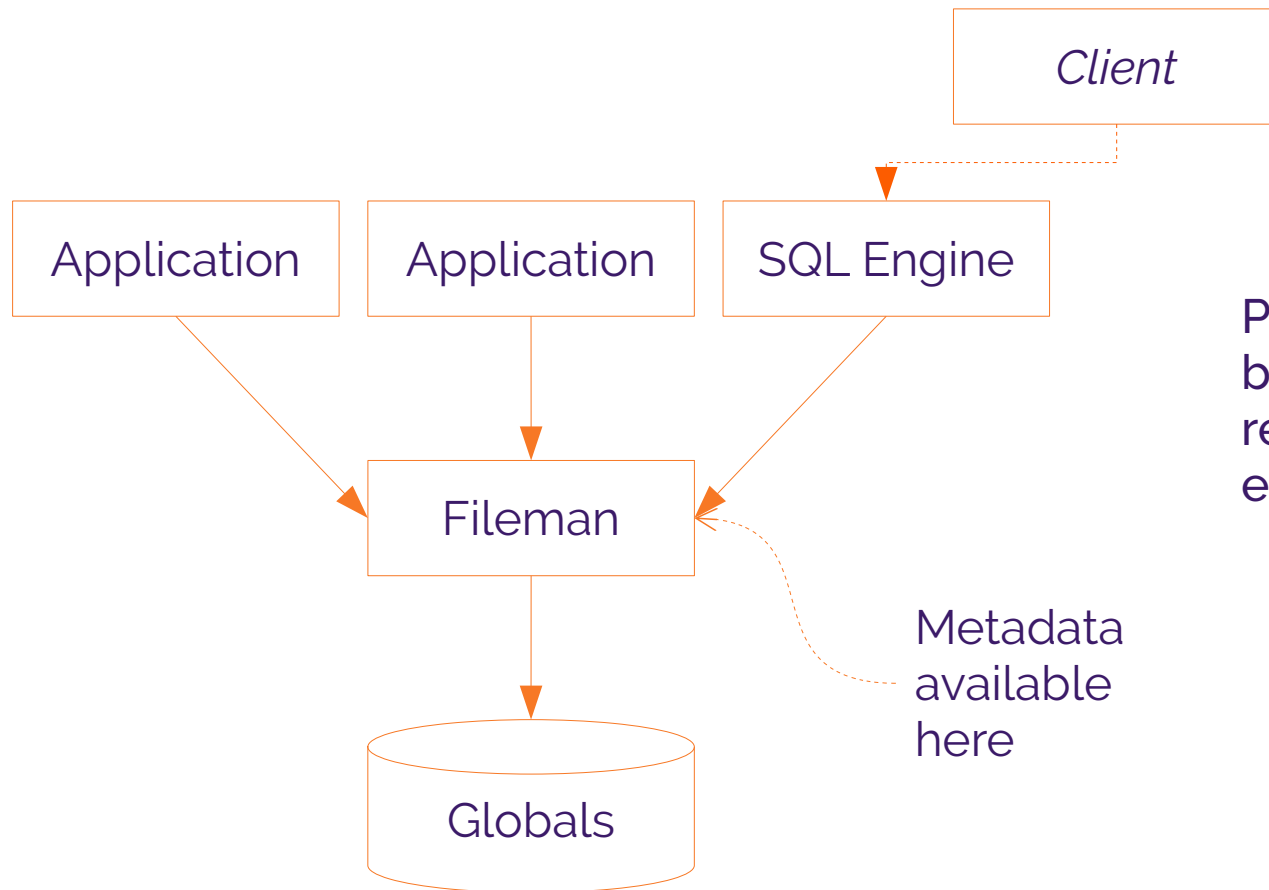

# SQL Access (Conceptual)

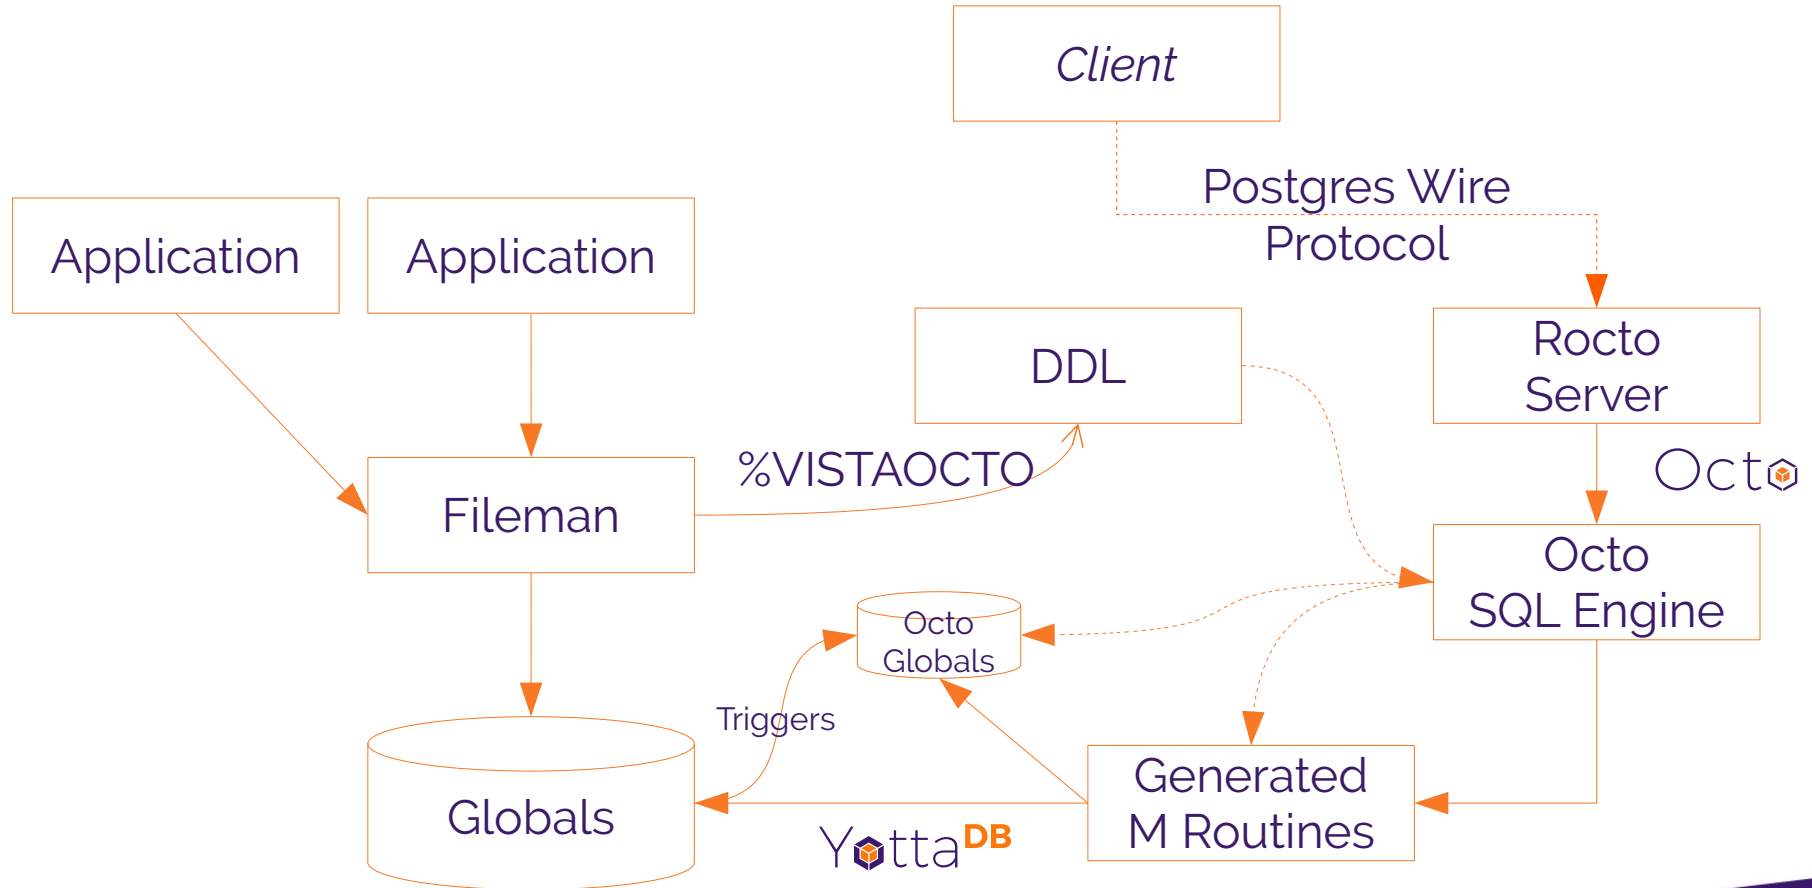

# SQL Access (Limitation)

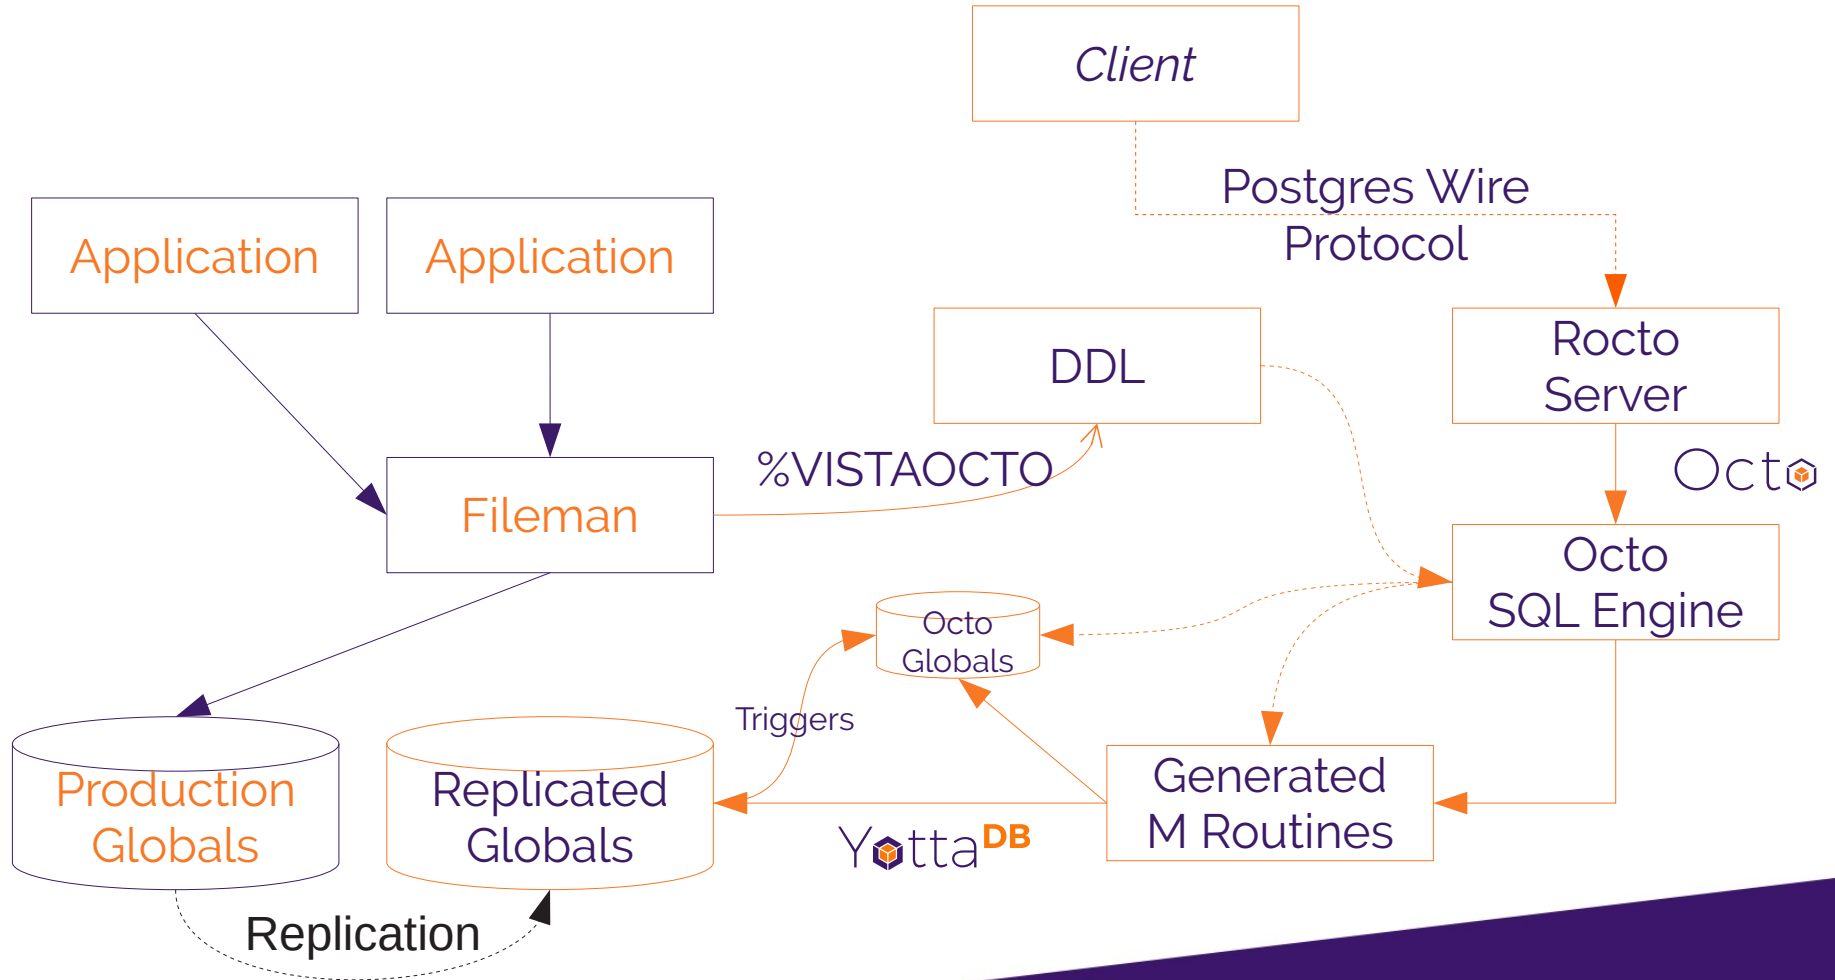

Performance bottleneck from reading metadata for every query!

Metadata available here

# Octo Architecture

# Octo Production Configuration

## Demo Part 2 of 2

# Octo Status & Road Map

- <https://gitlab.com/YottaDB/DBMS/YDBOcto>
- Initial production release Any Day Now™
  - VistA Fileman to DDL mapping tool
  - Read-only access (SQL-92 plus required extensions)
  - PostgreSQL compatible JDBC client support
- To follow: read-write access, other RDMS compatibility

YottaDB

*Thank You!*
